

"I choose to specify products from companies who:

- Understand my requirements
- Make it easy for me to find the information I need
- Offer a reliable, premium quality product range
- Have a professional and knowledgeable technical support team
- Focus on providing excellent customer service
- Will look after my clients...

...and who care about customer satisfaction."

Welcome to Reynaers

Reynaers Aluminium is a very successful family-owned global business specialising in the development and marketing of innovative and sustainable building envelope solutions, including unitised façades, curtain wall, windows, entrance doors, bifold doors, sliding doors, sun screening and roof systems.

Established in 1965, Reynaers is market leader in Belgium and enjoys a strong presence in many other countries across five continents. With a turnover in excess of €360m, the Reynaers Group employs over 1600 people worldwide and is making significant investments in its people, products, offices and design and testing facilities to pave the way for further growth in the years to come.

Reynaers has been established in the UK since 1990 and has a head office in Birmingham and a satellite design office in Uxbridge.

Médiacité, Belgium. Lead architects: Ron Arad Architects. Executive architect: Jaspers & Eyers.

Experienced and expert

For over 50 years, Reynaers has been designing premium quality glazing solutions for some of the most iconic buildings in the world.

Engineered without compromise, our range of aluminium glazing products is specified time and again by the world's leading architects and construction companies.

Office Bee Garden, Bulgaria.

Reliable and durable products

All Reynaers products are designed and tested to the most rigorous standards. When you specify Reynaers, you do so knowing that our products have been proven to provide many years of reliable service.

To help demonstrate the quality and value for money that our products offer, we can supply corner samples, literature, colour swatches and videos for you to use. Furthermore, we can arrange for you and your clients to see our products first hand in a network of showrooms around the country.

Quality and accreditations

All our products are thoroughly tried and tested for quality and performance, earning Reynaers an enviable reputation of excellence amongst the world's leading architectural practices and construction companies.

Our product range has been independently tested to meet and often exceed the requirements for a range of British and European standards. Furthermore, Reynaers is proud to have been awarded a number of recognised and prestigious accreditations, and we choose to work to some stringent voluntary standards.

All of this means that with Reynaers you are not only specifying a truly top quality product, but as a company we have the processes and quality standards in place to make sure our service is second to none.

Sofia Airport Centre, Bulgaria.

Unrivalled technical support

Our dedicated team of experienced architectural consultants and technical advisors is on hand to answer your technical questions and to provide whatever support you need to be able to complete your specification with the minimum of fuss.

As you would expect from an established and respected company, there is a comprehensive set of technical literature available for you to browse on-line and to download. Whether you need a full technical catalogue, a short technical summary sheet, case studies or photographs, you will find everything you need on our website. Naturally there is also a comprehensive set of CAD drawings and BIM models available to download too.

Ferrari World, Abu Dhabi, UAE.

Freedom of design

Architects tell us time and again that one of their biggest frustrations is the need to compromise their original design due to the limitations of the products they are specifying.

Reynaers' product range has been developed specifically to overcome many of these limitations. Whether your vision is for a building of angles or curves, traditional or contemporary, our team of experts will be pleased to help make your vision a reality.

Wollux Building, Belgium. Architect: Jean-luc Dewulf.

Complete envelope solutions

Reynaers' product range has been developed to provide a comprehensive range of solutions for any project, allowing you to specify products according to the size, performance level, style and colour that you need.

What's more, we have a dedicated team of development experts who are on hand to design and test bespoke solutions for individual projects. It's not hard to see why so many specifiers are turning to Reynaers for their architectural glazing needs.

Narvil Hotel, Poland.

Flexibility, not bureaucracy

At Reynaers, we pride ourselves in being small enough to provide a very individual and professional service to all our customers, whilst at the same time offering the backing and significant resource that comes from being part of such a well established global enterprise.

With decades of experience of working with architects, contractors, developers and consultants, we have a thorough understanding of your business needs and are committed to delivering the very best levels of service for every project, large and small. Our aim is to ensure that once you have experienced working with Reynaers, you never have reason to look elsewhere ever again.

Broadway One, Glasgow, UK.

Performance matters

Reynaers offers a range of products that will meet a variety of different performance levels for thermal insulation, weather resistance, security and noise reduction. If you need Passive House standard, we can help; if you need Secured by Design standard, we can help there too. Our range of products allows you to choose the best product for the project, whilst always offering exceptional value for money.

Understated beauty

We understand that sometimes great building design is about being sympathetic to the environment rather than being too bold. Our experienced advisors are on hand to help, whether you want to blend in or stand out.

Menorah Jewish Multifunctional Centre, Ukraine.

Environmental responsibility

In the UK and globally, Reynaers has an unwavering commitment to our environmental responsibility.

Aluminium is a material that is 100% recyclable without loss of quality. Not only does this mean that we can supply aluminium windows and doors with a high recycled content with guaranteed quality, but it also means that these same products can themselves be recycled at the end of their lives.

Our products are also designed to offer industry-leading levels of thermal performance. Clever design and state-of-the-art thermal breaks help keep heat-loss to a minimum, meaning more efficient glazing and lower energy bills for the end user.

At Reynaers, we recognise that our business activities impact on the environment in a number of different ways and we are committed to reducing this impact where possible. In order to achieve our commitment we have developed and implemented an Environmental Management System that meets the requirements of ISO 14001. This is subject to regular review and audit to ensure the continuing effectiveness of environmental management at our organisation.

"We've been working with Reynaers for several years... their commitment to excellence and attention to detail is second to none."

David James David James Architects

"When there are project challenges, Reynaers seem to move heaven and earth to deliver."

Phil Sedge Operations Director, Mace

"I would recommend the Reynaers team; they are very efficient and helpful."

Stephen Leemans, Senior Job Manager, Lyons Sleeman & Hoare Architects

"Reynaers aren't afraid to help us when we're trying to do something that's non-standard, which is exactly what we want from a partner who supplies curtain walling."

Tom Jordan Project Architect Barr Gazetas Architects

"I would definitely recommend Reynaers.
They have been fantastic on a range of projects... they offer a personal service and their products work."

Dan Fleming Broadway Malyan Architects

Avilon Plaza, Moscow, Russia.

Knowledge sharing

Architectural construction projects require a collaboration between several people from a number of different organisations, each bringing their own expertise and experience. Not only does Reynaers employ some of the most knowledgeable people in the industry, we also are proud to have strong relationships with a comprehensive network of fabricators, contractors, architects and consultants.

Furthermore, Reynaers has a dedicated training resource both in the UK and at our Head Office in Belgium, making it possible for us to offer a series of formal training courses to our fabricator and contractor partners.

For the architect and specifier, we have a highly skilled team of technical advisors and estimators who are on hand to offer support on the phone or on email, and we have a team of consult managers who are pleased to offer advice, presentations and RIBA accredited CPDs as required.

Sudop, Prague, Czech Republic. Architect: Tomáš Pechman.

Tried and tested

At our head office in Belgium we have what is probably the largest and most sophisticated in-house design and testing facility in Europe, and perhaps in the world.

This facility makes it possible for our highly experienced team of designers to develop products that meet the most stringent of test regimes.

It also provides the facility for a very comprehensive range of project-specific tests, so you and your clients have every possible reassurance that the products you specify will meet or exceed every expectation.

Curtain wall

Reynaers' pedigree for large commercial projects is impeccable. With a comprehensive range of unitised and stick curtain wall products, Reynaers facades have been used on many of the world's most iconic buildings.

With our world class ability to offer bespoke project solutions, we are proud to be able to say that with Reynaers almost anything is possible.

Unitised façades

Unitised or elemental facades are pre-fabricated in a factory, offering advantages in terms of quality of manufacture.

On-site, unitised facades make fast and economic installation possible.

This construction principle is particularly suitable for high rise constructions, giving the opportunity to finish the building construction floor by floor allowing for parallel construction inside the building.

Reynaers is proud to offer a wide range of exceptionally high-performing unitised façade solutions. Not only do these systems offer endless possibilities in design freedom and quick installation on-site, but they are also designed to be easily adapted to make non-standard connections.

Combined with the ability to offer fully bespoke project solutions, industry-leading technical support and an expert inhouse design capability, it is not hard to see why Reynaers' unitised façade systems have been specified on many of the most high-profile projects in the UK and around the world.

Windows and doors

Our range of window and door systems is designed to ensure that there is a product for every requirement. We have products that carry the Secured by Design accreditation and products that meet the very stringent Passive House and Minergie standards. We can offer products designed to withstand extreme wind loading, products with exceptional acoustic performance, fire resistant products, and we even have products that are bullet-proof.

A choice of aesthetic styles is available to ensure the windows and doors match the style of the building, and you can choose to have a hidden vent or slim line profile, too.

We can offer picture windows of an impressive size, and for an even more impressive façade, you can choose from our comprehensive range of curtain wall options.

Hi-Finity sliding door

The Hi-Finity sliding door is the epitome of modern design, combining the ultimate in contemporary aesthetics with outstanding performance. This state-of-the-art structurally glazed door is designed so that the frame can be concealed in the wall, making the dream of floor-to-ceiling and wall-to-wall glass a reality.

Industry-leading maximum sizes and super-slim profiles make the Hi-Finity door a truly impressive design statement. For the ultimate in prestige and convenience, the door can be fully automated so it opens and closes at the touch of a button.

Sliding patio doors

In addition to the flagship Hi-Finity product, the Reynaers product range includes two further sliding doors, giving you the ability to specify a product that meets your exact requirements.

Choose sliding doors with single, double or triple track designs; slim line options; slide or lift-and-slide mechanisms; manual or automatic operation.

Our range of doors offers industry-leading maximum sizes, excellent thermal and weather performance, and security levels that meet or exceed the relevant British and European standards.

Bi-fold doors

Our elegant bi-fold doors combine strong slim frames with the very best hardware that is designed to ensure the doors give many years of reliable, trouble-free operation. These doors are available in a choice of four different threshold options from flat bottom to high performance, and there is a slim line variant too, with even narrower door leaf profiles. Our range of doors offers industry-leading maximum sizes, excellent thermal and weather performance, and security levels that meet or exceed the relevant British and European standards.

Complementary systems

There are a number of other complementary products in our range, which include the following:

- Brise soleil sun shading systems can comprise louvers made from aluminium or glass, and can even be combined with solar photovoltaic panels.
- Balustrade systems are available in different styles and include an all glass balustrade that is compatible with our sliding doors.
- Ventalis is a self-regulating ventilation system that can be incorporated into the top frame of our windows and doors.
 Manually adjusted to offer five levels of ventilation, the self regulating system is designed to keep the airflow constant with changes in wind pressure outside. The ventilation units are both insect repellent and rainproof and are cleverly insulated to minimise the risk of condensation.

Finishing touches

Across our product range there are literally hundreds of finishes to choose from: a huge range of RAL colours in a choice of gloss or matt finish, metallic colours, highly durable textured metallic Coatex finishes, wood-grain finishes and anodised options too. And of course you can have a different colour inside and out.

There is also an exclusive range of Italian-designed Purity handles that is suited across our whole product range for a perfect finishing touch.

Contact us today and see
for yourself why so many
architects, contractors, developers,
consultants and fabricators are making
Reynaers their system of choice.
